

Financial Analysis Dashboard — Excel & SQL

Project Overview

This project analyzes financial data using **SQL and Advanced Excel** to evaluate revenue, expenses, profitability, departmental performance, and potential cost-saving opportunities.

The dashboard provides an interactive financial overview that helps identify spending patterns, monitor profitability, and support data-driven business decisions.

Tools & Technologies

- Microsoft Excel
- SQL
- Pivot Tables
- VLOOKUP / XLOOKUP
- SUMIFS / COUNTIFS
- Excel Charts
- Data Cleaning
- Financial KPI Analysis

Key KPIs

KPI	Description
Total Revenue	Overall revenue generated
Total Expenses	Total business expenditure
Net Profit	Revenue minus expenses
Profit Margin	Net profit as a percentage of revenue
Cost Savings Opportunity	Identified potential cost reduction

Dashboard Features

- Revenue vs. Expenses analysis
- Monthly profit trend
- Department-wise financial performance
- Expense category analysis
- Budget vs. Actual comparison
- Cost-saving opportunity analysis
- Interactive Excel filters
- Pivot-table based reporting

SQL Analysis

SQL was used to:

1. Extract and aggregate financial data.
2. Calculate revenue, expenses, and net profit.
3. Compare departmental performance.
4. Identify high-cost categories.
5. Detect potential cost-saving opportunities.

Business Insights

The analysis identified potential cost-saving opportunities of approximately **\$50,000** in the illustrative project dataset.

The dashboard can help management:

- Identify high-expense departments.
- Monitor monthly profitability.
- Compare actual spending with budgets.
- Prioritize areas for cost reduction.
- Improve financial reporting efficiency.

Note: The \$50K savings figure is presented as a project/portfolio result based on the illustrative analysis and should be replaced with your actual validated result if you use real business data.

Resume Description

Financial Analysis Dashboard | Excel, SQL

- Analyzed financial data using SQL and Advanced Excel to evaluate revenue, expenses, profitability, and business performance.
- Built an interactive financial dashboard using Pivot Tables, VLOOKUP/XLOOKUP, formulas, KPI cards, and charts.

- Identified approximately **\$50K in potential cost-saving opportunities** through expense and budget-vs-actual analysis.

Future Improvements

- Add Power BI version of the dashboard.
- Automate data refresh using SQL.
- Add forecasting models.
- Add financial variance analysis.
- Integrate real-time financial data sources.
